Table Description:

1. Class:

Each class has an id and section, class id is auto-incremented. Class id and number are composite keys and each class has a certain number of students.

2. Course:

Course include course_id as a primary key which is auto incremented. Course has a name as well as a class it is offered in.

3. Parent:

Every student has parents. Parent id is the primary key which is auto-incremented. Every father and mother have cnic number, contact number, address and email.

4. Guardian:

Each guardian has guardian id as primary key which will be auto-incremented.

Guardian has a name, address, cnic, contact number and relationship with the student.

5. Sign-Up:

Every student has to sign up before registration where they will be assigned username and password. Student id is present here as a foreign key.

6. Staff:

Every staff has an id which is auto-incremented. It also has name, address, contact number, cnic, as well as the organization where they work as a foreign key.

7. Student:

Every student has an id as a primary key which is auto-incremented, as well as name, gender, date of birth. It also has a class id where he studies as a foreign key.

8. Study:

Every student study some course. Each course has an id and course code which are stored as a composite key in the study table.

9. Care:

For students with guardian, child id and guardian id are stored as a foreign key as well as a composite key.

10. Account:

In order to pay fee a challan form is generated; challan number is stored as a primary key. Student id is stored as a foreign key for the student who is paying fee. Other attributed include amount, discount, due date, issuance date and paying date.

SQL statements used to create tables:

1. Class:

```
CREATE TABLE Class
```

```
(
```

```
    class_ID INT(2) AUTO_INCREMENT,
```

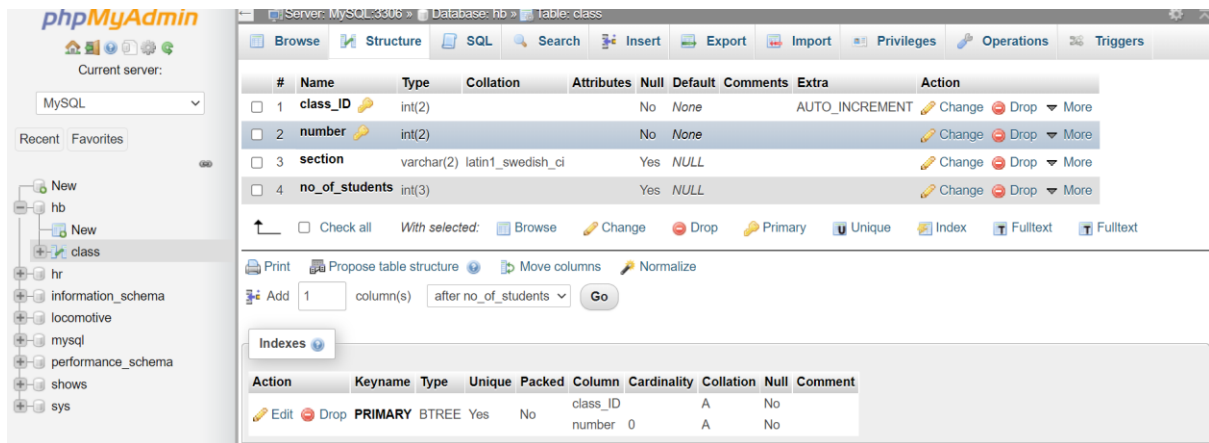

```
    number INT(2),
```

```
    section VARCHAR(2),
```

```
    Primary KEY(class_ID,number),
```

```
    no_of_students INT(3)
```

```
);
```

2. Course:

CREATE TABLE Course

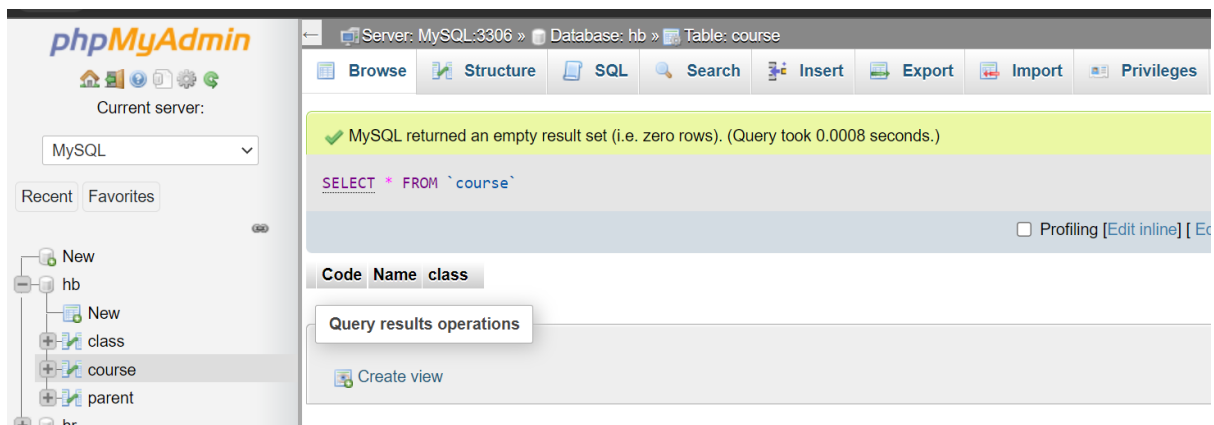

(

Code VARCHAR(4) PRIMARY KEY,

Name VARCHAR(15),

class INT(2)

);

3. Parent:

CREATE TABLE Parent

(

P_ID INT(5) PRIMARY KEY AUTO_INCREMENT,

F_Name VARCHAR(30),

F_address VARCHAR(50),

F_contactNo CHAR(11) UNIQUE,

F_cnic CHAR(13) UNIQUE,

F_email VARCHAR(20) UNIQUE,

M_Name VARCHAR(30),

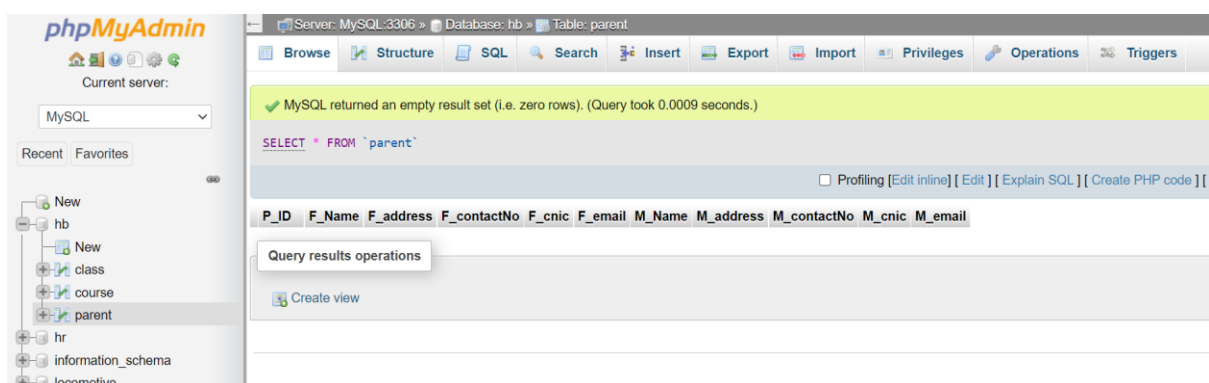

M_address VARCHAR(50),

M_contactNo CHAR(11) UNIQUE,

M_cnic CHAR(13) UNIQUE,

M_email VARCHAR(20) UNIQUE

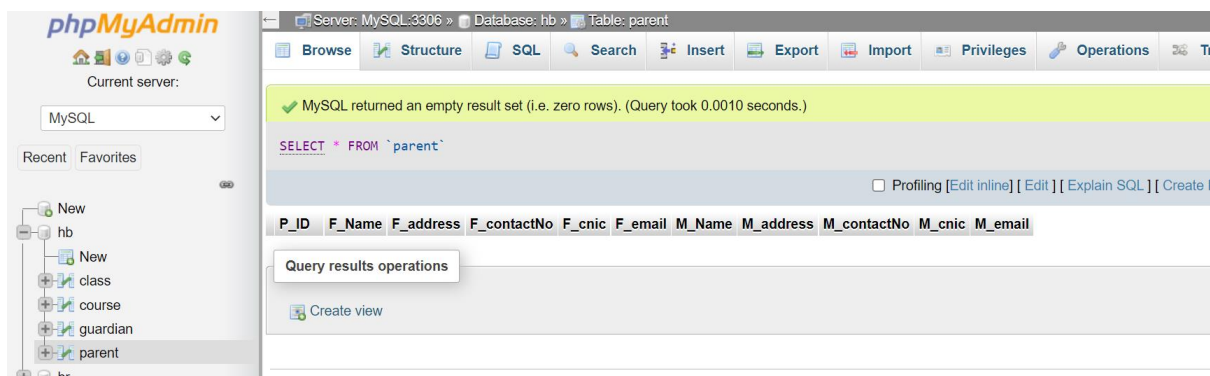

);

4. Guardian:

CREATE TABLE Guardian

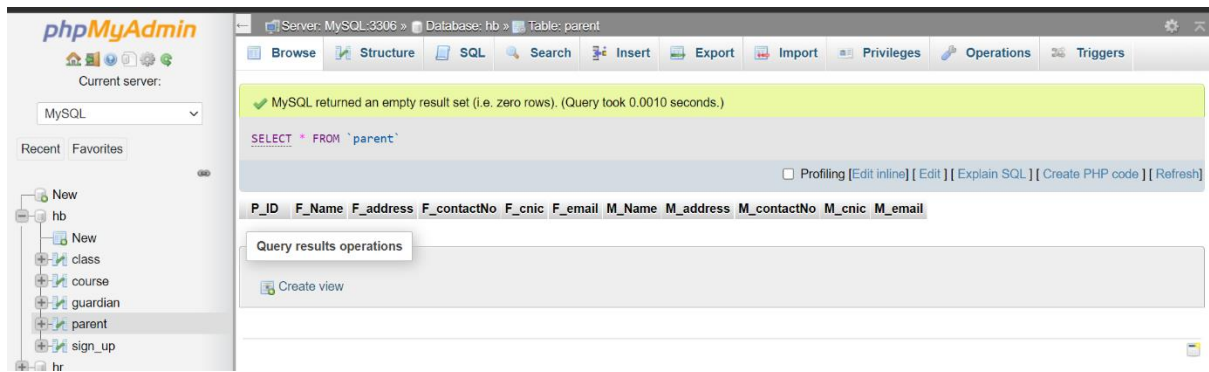

```
(
    G_ID INT(5) PRIMARY KEY AUTO_INCREMENT,
    G_Name VARCHAR(30),
    G_address VARCHAR(50),
    G_contactNo CHAR(11) UNIQUE,
    G_cnic CHAR(13) UNIQUE,
    G_gender VARCHAR(6),
    G_relationship VARCHAR(50)
);
```

5.Sign up:

```
CREATE TABLE Sign_up
```

```
(
    username VARCHAR(25) PRIMARY KEY,
    passcode VARCHAR(10),
    s_id INT(3),
    FOREIGN KEY (s_id) REFERENCES student(ID)
);
```

6. Staff:

CREATE TABLE Staff

(

 ID INT(5) PRIMARY KEY AUTO_INCREMENT,

 firstName VARCHAR(15),

 lastName VARCHAR(15),

 address VARCHAR(50),

 contactNo CHAR(11) UNIQUE,

 cnic CHAR(13) UNIQUE,

 gender VARCHAR(6),

 email VARCHAR(20) UNIQUE,

 job_type VARCHAR(20),

 NGO_name VARCHAR(20),

 FOREIGN KEY (NGO_name) REFERENCES ngo(Name)

);

7. Student:

CREATE TABLE Student

(

 ID INT(5) PRIMARY KEY AUTO_INCREMENT,

 firstName VARCHAR(15),

 lastName VARCHAR(15),

 gender VARCHAR(6),

 dateofbirth date,

 Age INT(2),

 parents_id INT(3),

 FOREIGN KEY (parents_id) REFERENCES parent(P_ID),

 class_id INT(2),

 FOREIGN KEY (class_id) REFERENCES class(class_ID)

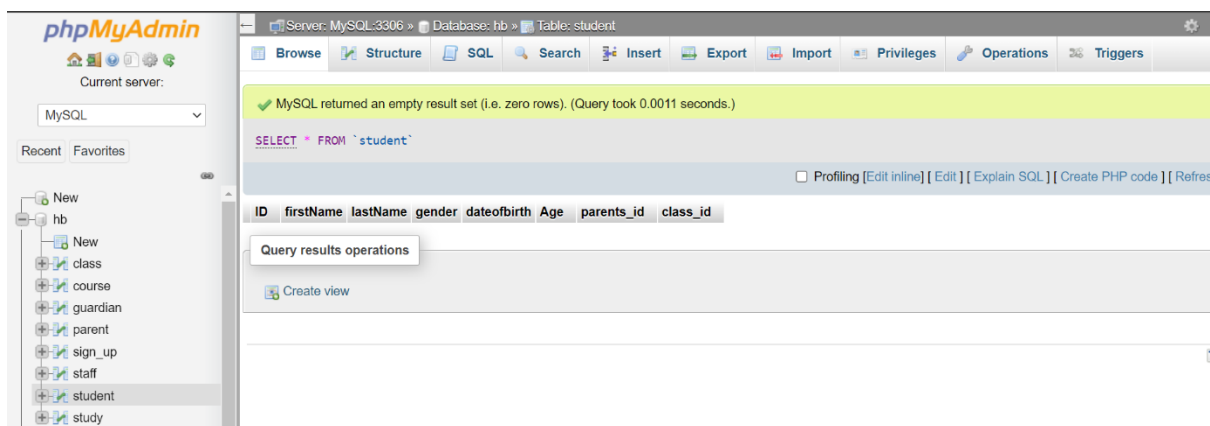

);

8. Study:

CREATE TABLE study

(
 student_id INT(5),
 course_code VARCHAR(5),
 PRIMARY KEY (student_id,course_code)
);

9. Care:

CREATE TABLE care

(
 child_id INT(5),

```

FOREIGN KEY (child_id) REFERENCES student(ID),

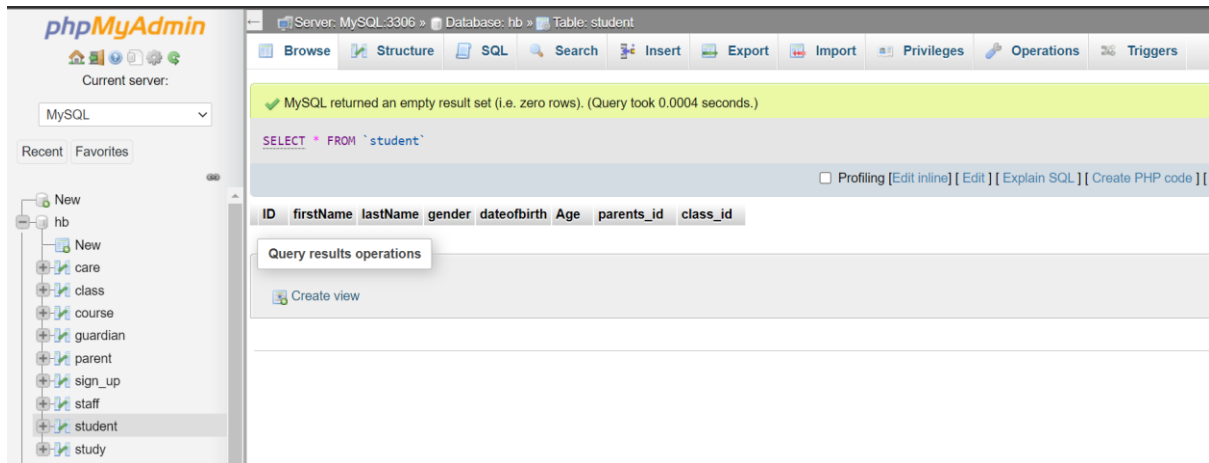

guardian_id INT(5),

FOREIGN KEY (guardian_id) REFERENCES guardian(G_ID),

PRIMARY KEY (child_id,guardian_id)

);

```

10. Account:

CREATE TABLE Account

```

(
    challanNo INT(8) PRIMARY KEY AUTO_INCREMENT,
    Amount INT(6),
    Discount INT(3),
    Discounted_amount INT(6),
    paid tinyint(1),
    Due_date date,
    issue_date date,
    paid_date date,

```

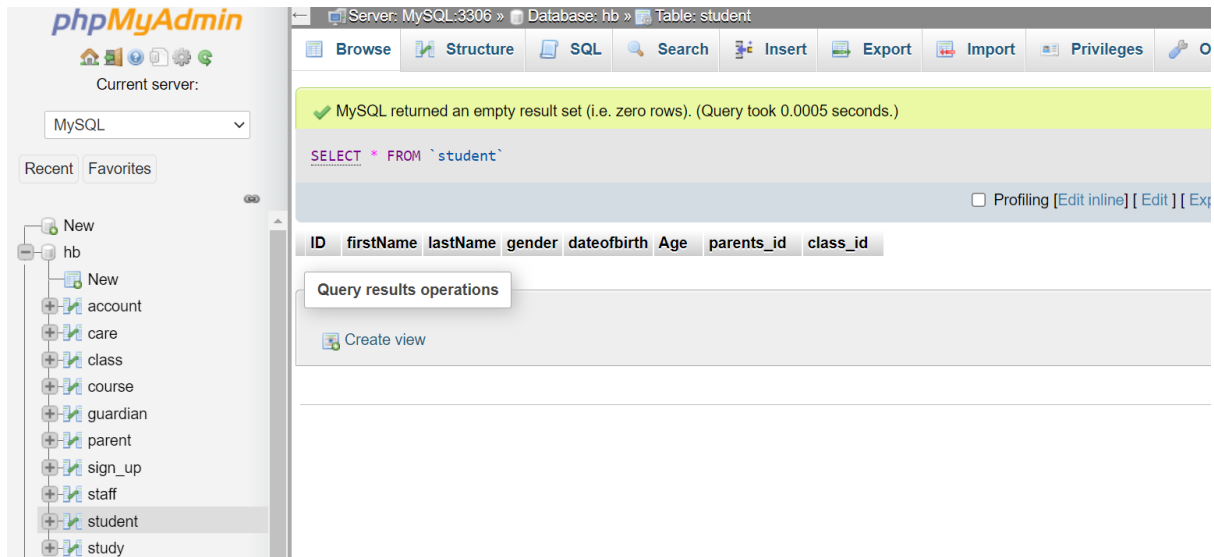

```

s_id INT(5),

FOREIGN KEY (s_id) REFERENCES student(ID)

);

```

Sql statements to populate tables:

INSERT INTO

eacher','Male');
```

The screenshot shows the phpMyAdmin interface with the 'staff' table selected. The table has 10 columns: ID, firstName, lastName, address, contactNo, cnic, gender, email, job_type, and NGO_name. The table contains 10 records, numbered 1 to 10. The interface includes a sidebar with a database tree and a top navigation bar with various tools like Browse, Structure, SQL, Search, Insert, Export, Import, Privileges, Operations, and Triggers.

| ID | firstName | lastName | address | contactNo | cnic | gender | email | job_type | NGO_name |
